

MOHAMMED WASIM KHAN

Visakhapatnam, Andhra Pradesh, India

+91-9640011405 wasim143mr@gmail.com LinkedIn GitHub

Professional Summary

MERN Stack Developer with hands-on experience building scalable, full-stack web applications using MongoDB, Express.js, React, and Node.js. Skilled in designing RESTful APIs, implementing JWT authentication, and optimizing database performance across PostgreSQL and MongoDB. Experienced in Agile development, CI/CD pipelines, and delivering production-ready applications with sub-150ms response times. Passionate about crafting clean, component-driven UIs and robust backend architectures that solve real-world problems.

Technical Skills

MERN Stack: MongoDB, Express.js, React, Node.js, REST APIs, JWT Authentication, Redux, Context API

Frontend: React, Angular, Vite, Tailwind CSS, HTML5, CSS3, Responsive Design, Component Architecture

Backend: Node.js, Express.js, Flask, FastAPI, RESTful APIs, Middleware, MVC Architecture

Databases: MongoDB, PostgreSQL, MySQL, SQLite, Database Design, Query Optimization, Indexing

Languages: JavaScript (ES6+), TypeScript, Python, Java, C++, SQL, Bash

DevOps & Tools: Git, Docker, AWS, Linux, CI/CD, Postman, Jupyter, Agile/Scrum

Core CS: Data Structures and Algorithms, System Design, OOP, DBMS

Education

VIT-AP University, Amaravathi

Nov 2021 – Present

Integrated M-Tech in Software Engineering (Computer Science)

CGPA: 8.33/10

Narayana Junior College, Vizag

May 2018 – July 2020

Intermediate (MPC)

CGPA: 8.88/10

Experience

Software Development Instructor Intern

Apr 2026 – Present

NextWave Disruptive Technologies

Hyderabad, IN (Hybrid)

- Delivered structured frontend development instruction covering React, JavaScript, and modern web technologies to students, simplifying complex full-stack concepts into practical, project-based learning.
- Reviewed and debugged student MERN stack projects daily, reinforcing best practices in component architecture, API integration, and MongoDB schema design.
- Strengthened technical communication and code documentation skills by explaining UI/UX patterns, REST API design, and debugging workflows across varying skill levels.

Software & Data Engineering Intern

Jul 2024

Rashtriya Ispat Nigam Limited (Vizag Steel Plant)

Visakhapatnam, IN

- Built a full-stack healthcare management system using React and Node.js, supporting 5,000+ daily transactions with robust data integrity and a 20% reduction in patient wait times.
- Developed and integrated RESTful APIs connecting frontend dashboards to backend databases, streamlining data flow across manufacturing operations.
- Optimized PostgreSQL and MySQL queries through execution plan analysis and indexing, reducing average response time from 850ms to 240ms — a 72% improvement.

Projects

CodeToCareer - Full Stack Placement Platform | *React, Node.js, Express.js, MongoDB, JWT*

Dec 2025

- Architected and deployed a full-stack MERN application featuring course management, real-time discussion forums, and user authentication serving 200+ active users.
- Built scalable RESTful APIs with JWT-based role authentication (admin/student), achieving sub-150ms response times for 95% of endpoints through middleware optimization and query tuning.
- Designed a normalized MongoDB schema with efficient indexing, ensuring consistent read/write performance under concurrent user load.

AI Interview Preparation Bot | *React, Node.js, Azure OpenAI, RAG, MongoDB*

Jan 2026

- Built an end-to-end full-stack AI platform with a React frontend and Node.js/Express backend, integrating Azure OpenAI APIs for real-time, resume-aware Q&A generation.

- Designed a RESTful API layer managing PDF ingestion, vector-based retrieval pipelines, and dynamic response delivery — reducing interview preparation time by 40%.

Smart Attendance System | *Python, OpenCV, CNN, MySQL, SQLite*

Aug 2024

- Engineered a real-time facial recognition attendance system with automated backend logging via MySQL and SQLite, processing 300+ concurrent daily entries with 98% detection accuracy.
- Reduced manual attendance processing time by 90% through automated data pipelines, demonstrating full lifecycle development from model inference to database persistence.

Spam Email Detection System | *Python, Scikit-learn, NLP, NLTK, Flask*

Mar 2025

- Built an NLP-powered classification pipeline with a Flask API backend, processing 15,000+ samples with 96% precision and 0.95 F1-score across Naive Bayes, SVM, and Random Forest models.
- Designed the end-to-end pipeline from data preprocessing (tokenization, TF-IDF) through model inference to REST API response — mirroring full-stack ML integration patterns.

Certifications & Achievements

Gemini Certified University Student | *Google*

Dec 2025

Object Oriented Programming - Basics to Advanced | *Udemy*

Nov 2023

University Chess Player | *Strategic planning and analytical problem solving*
