

MOHAMMED WASIM KHAN

Visakhapatnam, Andhra Pradesh, India

+91-9640011405 wasim143mr@gmail.com LinkedIn GitHub

Professional Summary

AI/ML Engineer and Full Stack Developer with hands-on experience building production-grade machine learning pipelines, RAG architectures, and intelligent data systems. Proficient in Python, Google Cloud (Vertex AI, Gemini), and ML frameworks including TensorFlow and Scikit-learn, with applied experience in NLP, AML compliance modeling, lead scoring, and risk pattern recognition. Passionate about closing the gap between academic ML and production ML — delivering models that make real decisions at scale in high-stakes environments.

Technical Skills

AI & Machine Learning: Google Vertex AI, Gemini API, Azure OpenAI, RAG Architecture, TensorFlow, Scikit-learn, NLP, Deep Learning (CNN, ANN), Pandas, NumPy, NLTK, TF-IDF, SVM, Random Forest, Naive Bayes

ML Applications: AML Compliance Modeling, Lead Scoring, Risk Pattern Recognition, Emotion Classification, Spam Detection, Facial Recognition

Languages: Python, JavaScript, TypeScript, Java, C++, Go, SQL, Bash

Frontend: React, Angular, Vite, Redux, Tailwind CSS

Backend: Node.js, Express.js, Flask, FastAPI, RESTful APIs, JWT Authentication

Databases & Infrastructure: MongoDB, PostgreSQL, MySQL, SQLite, Docker, AWS, Git, Linux, CI/CD, Jupyter

Core CS: Data Structures and Algorithms, System Design, OOP, DBMS, Agile Methodologies

Education

VIT-AP University, Amaravathi

Nov 2021 – Present

Integrated M-Tech in Software Engineering (Computer Science)

CGPA: 8.33/10

Narayana Junior College, Vizag

May 2018 – July 2020

Intermediate (MPC)

CGPA: 8.88/10

Experience

Software Development Instructor Intern

Apr 2026 – Present

NxtWave Disruptive Technologies

Hyderabad, IN (Hybrid)

- Delivering frontend development instruction to students across React, JavaScript, and modern web technologies — breaking down complex concepts into structured, beginner-friendly learning paths.
- Continuously learning and applying new frontend frameworks and tooling daily, maintaining a growth mindset aligned with fast-paced product and AI-driven development environments.
- Strengthened technical communication and documentation skills by explaining code architecture, debugging workflows, and UI design patterns to learners at varying skill levels.

Software & Data Engineering Intern

Jul 2024

Rashtriya Ispat Nigam Limited (Vizag Steel Plant)

Visakhapatnam, IN

- Engineered a scalable data architecture and full-stack healthcare management system using React and Node.js, ensuring data integrity for 5,000+ daily transactions and reducing patient wait times by 20%.
- Designed and deployed automated ML-assisted workflows that eliminated 30% of manual data entry errors across manufacturing operations, improving operational data quality for downstream analytics.
- Optimized PostgreSQL and MySQL database queries powering reporting dashboards, reducing average query response time from 850ms to 240ms (72% improvement) through execution plan analysis and strategic indexing.

Projects

AI Interview Preparation Bot | *React, Node.js, Azure OpenAI, RAG, MongoDB* |

Jan 2026

- Architected a production-grade AI coaching platform leveraging Retrieval Augmented Generation (RAG) and Azure OpenAI to parse PDF resumes and deliver personalized, context-aware technical Q&A at scale.
- Implemented NLP-driven document ingestion and vector-based retrieval pipelines, reducing candidate interview preparation time by 40% through targeted, feedback-loop-driven responses.

Spam Email Detection System | *Python, Scikit-learn, NLP, NLTK, TF-IDF* |

Mar 2025

- Engineered a production-ready NLP classification pipeline processing 15,000+ text samples; applied tokenization, stemming, and TF-IDF vectorization to extract signal for downstream classifiers — methodology directly applicable to AML compliance and fraud pattern detection in BFSI.

- Benchmarked Multinomial Naive Bayes, SVM, and Random Forest with hyperparameter tuning, achieving 96% precision and 0.95 F1-score; minimized false positives critical for high-stakes decision-making environments.

Smart Attendance System | *Python, OpenCV, CNN, Deep Learning, MySQL* |

Aug 2024

- Built a real-time facial recognition system using CNN embeddings trained on 500+ student profiles, achieving 98% detection accuracy — demonstrating expertise in deploying deep learning models to production with real constraints.
- Automated attendance logging via SQLite and MySQL, handling 300+ concurrent daily scans and reducing manual processing time by 90%; a model for scalable ML infrastructure in high-transaction environments.

Text-Based Emotion Classifier | *Python, NLP, SVM, ANN, N-grams* |

Jun 2024

- Researched and implemented advanced multilingual text classification using Naive Bayes, SVM, and ANN on Indian language datasets — directly relevant to risk signal extraction from unstructured insurance data.
- Engineered N-gram models to handle complex linguistic patterns, significantly improving retrieval accuracy of localized textual data for downstream classification tasks.

CodeToCareer - Placement Platform | *React, Node.js, Express, MongoDB* |

Dec 2025

- Developed a scalable placement preparation platform with course management and real-time discussion forums serving 200+ active users.
- Implemented RESTful APIs with JWT-based authentication achieving sub-150ms response times for 95% of endpoints through performance profiling and optimization.

Certifications & Achievements

Gemini Certified University Student | *Google* – Certified in Google Gemini AI development

Dec 2025

Object Oriented Programming - Basics to Advanced | *Udemy*

Nov 2023

University Chess Player | *Strategic planning and data-driven competitive problem solving*
